## Working Towards a Sustainable Fishery

Nile Perch and Tilapia for the Greenfields **Sustainable Product range** is caught from the wild using selected hooks and gillnets of recommended size to prevent catching immature fish.

### Internal Control System (ICS)

#### *a) Control of Fishing Activities*

Greenfields, in partnership with EPOPA, has motivated fishing communities on Lake Kyoga to become committed to sustainable fishing practices. This has been achieved both through sensitization of fishers and setting up a monitoring system for fishing activities. This is a central piece of the Internal Control System.

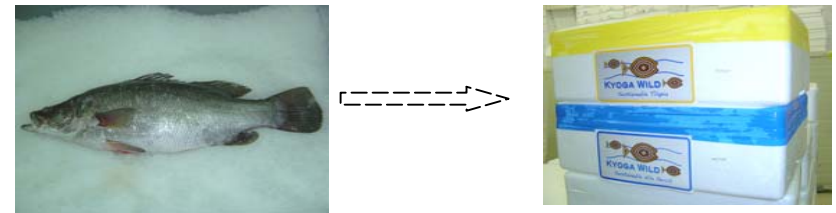

In order to make this happen, Greenfields has developed a well-equipped Landing Site in Kikalaganya. Lighting as well as pumping of Borehole is powered by solar energy.

Fishermen have willingly exchanged their illegal nets, targeting immature fish, against nets of recommended mesh size provided to them by the Kyoga Wild Initiative at subsidized price.

#### *b) Production Control & Traceability*

Well-identified sustainable fish is handled, received and processed at Greenfields Factory in Entebbe, which is certified for both ISO 9001 and ISO 22000 Systems, following HACCP Principles.

Sustainable products can easily be traced, using Traceability Codes, from the packed and labeled products for dispatch back to the fishing ground.

### Products

#### *Nile Perch Products*

- Loins
- Portions (wide range)
- Steaks
- Fillets
- Whole Gutted

#### *Tilapia Products*

- ◇ Fillets
- ◇ Steaks
- ◇ Whole Gutted
- ◇ H&G
- ◇ Value-Added Products (wide range)
